Breadth is proven.

Progression is not.

Rave already has the products, subscriptions, education and service infrastructure. What public evidence cannot show is which entry route turns a new buyer into valuable repeat.

FOUNDER DECISION

Confirm whether Rave currently tracks how customers move between entry products.

Make one customer progression visible — then prove it compounds.

QUALIFIED ENTRY × FIRST CHOICE × 90-DAY REPEAT × PROGRESSION

A measurable growth relationship — not a financial forecast.

Replace every term with first-party baselines; test the sequence; scale only what improves durable customer value.

Four levers. One order of operations.

01	**ENTER**	Reach people at the moment supermarket coffee stops feeling good enough.
02	**CHOOSE**	Remove jargon and choice anxiety from the first decision.
03	**STAY**	Make freshness, delivery and control reliably worth repeating.
04	**PROGRESS**	Guide the customer from an everyday anchor into discovery.

The capable home-coffee upgrader

A plausible audience at a useful commercial moment — but not yet a confirmed Rave segment.

EVIDENCE REQUIRED

Validate against CRM cohorts, purchase sequence and customer interviews before campaign design.

PROVE THE PATH.

Test one guided route from first choice to repeat to discovery before adding offers, changing positioning or scaling acquisition.

THE TRADE-OFF

Focusing on one progression path temporarily de-emphasises other live routes (wholesale, gifting, rare releases), and delays broader positioning work until the test produces data.

MATT APPROVAL REQUIRED BEFORE FULL FIELDWORK PRODUCTION
